

## University Admission Management System (UAMS)

### Problem Statement:

Currently universities follow a manual paper-based process to enroll students as per course requirements. This is a lengthy and error-prone process which involves lot of man hours.

### Our Solutions:

- Digitize, modernize and streamline this process in conjunction with Appian powerful Intelligent document processing capability
- Automatically transform student's transcript data into records within minutes. No more manual reading of transcripts
- Machine learning embedded within the system, allowing to improve extract capability with each new transcript
- Plan to connect with Parchment and other widely used Transcript evaluation services to evaluate and transfer credits for the new admission
